WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Four rails 1750 long and two side rails 580 long, all 40 x 40 x 2 SHS.
Front rail and back rail 660 apart, outside faces; mid rail 320 from front.
Mid rail carries the rear tower plate; front rail the front plate.
Saw square, deburr, tack on a flat floor, check diagonals equal within 3.
Weld all round each joint; cap the open rail ends with 2 mm plate.
Drill 9 mm for M8: four in each rail under the tower plate tabs, two at each brace foot on the mid rail, four for the shield posts.
Glue an 80 x 80 x 10 EPDM pad under each corner.
Fits: the tower plates stand on the front and mid rails, bolted.
Check: frame flat within 3 mm when standing on its pads.
