WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Frame: two posts 1400 long and two cross members 1270 long of angle, mitred, welded into a rectangle 1320 x 1400 (outside).
One leg lies flat toward the pit; the other leg points back to the tower so the frame bolts to the front tower plate.
Sheet: 4 PP 1270 x 1140 with a 52 hole for the jackshaft, centre 60 right of the left edge of the sheet and 115 up.
Drill the sheet 8 at 200 pitch round its edge, frame 6.5; M6 A4 with large washers (PP moves with heat).
Fits: posts bolt to the front rail; the frame to the tower plate.
Check: no gap over 10 mm round the jackshaft or along the posts.

VATREEL

github.com/BoujeeEnjinia1701/vatreel

VatReel: splash shield (make 1)
