P1	Making sketch for the prototype build plan	2026-10-03	AC

WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Saw 1550 long; deburr; round the near end edge with a file.
Drill 10 cross holes at 100 pitch along its whole length, the first 50 from the near end, all in one line.
Mark each hole with the pit width it suits (punch marks).
Fits: slides inside the pivot tube; one lynch pin through both tubes sets the reach; the far stand clamps on it in a split sleeve.
Not needed for pits up to 1.22 m wide.
Check: at least 250 of it stays inside the pivot tube when pinned.

VatReel: extension tube (make 1)
