WHERE IT GOES
This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Axle: 900 of pipe. Spider hubs 40 long, at 180 and 780 from the near end.

Each spider: six spokes 30 x 6, 560 long, every 60 degrees, and six ties 25 x 6 between them at 420 radius (a hexagon).

Make a plywood jig with the six spoke lines so both spiders match; weld spokes to the hub, then ties, then the hubs to the axle, with the spokes of both spiders in line along the axle.

Drill each spoke tip 2 x 10.5 for the carrier bar end plates.

Fits: axle ends in the bushes in the arm blocks.

Check: spoke tips run true within 5 when the axle is spun.

VatReel: reel: axle and two spiders (make 1)
